

Date	30 September 2026	Team ID	SWTID-2026
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer	Maximum Marks	4 Marks

Ideation Phase — Brainstorm & Idea Prioritization Template:

Fostering collaborative problem solving to prioritize high-volume ideation and select feasible, high-impact automated workflows.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Before You Collaborate

Team Participants:

ServiceNow Admin, IT Procurement Lead, Hardware Fulfillment Team Lead, ITSM Process Owner.

Session Goal:

Eliminate manual handoff delays by automatically routing configuration tasks to the hardware team upon service request approval.

Problem Definition

Problem Statement:

The procurement process lacks automation, leading to delayed configuration tasks, manual overhead, and prolonged lead times for standard laptop delivery.

"How Might We" (HMW) Statement:

"How might we automatically generate and assign hardware configuration tasks upon request approval so laptops are promptly prepared with minimal manual intervention?"

Step-2: Brainstorm, Idea Listing and Grouping

Cluster A: Flow Designer Automation (Selected)

Idea 1 — Service Catalog Flow Trigger:

Trigger a native flow (`Standard laptop task`) upon Service Catalog submission.

Idea 2 — Auto-Generate `sc\_task`:

Create Catalog Task assigned directly to "Hardware" group with short description "Laptop need to Configured".

Idea 3 — Catalog Item Binding:

Assign flow directly via `Maintain Items` $\rightarrow$ `Process Engine` tab.

Cluster B & C: Scripted, Legacy & Manual Alerts

Idea 4 — Legacy Workflow Editor:

Build a graphical workflow on `sc\_req\_item` (higher technical debt).

Idea 5 — JavaScript Business Rules:

Write custom `after-insert` Business Rules to insert `sc\_task` records.

Idea 6 — Notification-Only Alerts:

Email alerts to the hardware queue without automatic record generation.

Step-3: Idea Prioritization (Importance vs. Feasibility)
