Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer	Maximum Marks	2 Marks

Ideation Phase — Define the Problem Statements:

A well-articulated customer problem statement allows the team to empathize with the end user and procurement personnel, uncovering root causes and emotional friction in the laptop procurement lifecycle.

I AM Customer persona & characteristics	I'M TRYING TO Desired outcome & user goal	BUT Pain point or barrier faced	BECAUSE Root cause that needs resolving	MAKES ME FEEL Emotional impact & frustration

Customer Problem Statement Breakdown

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1 (Requester)	An employee / business user ordering a standard work laptop through the Service Catalog.	Receive my configured laptop quickly after my service request is approved so I can perform my daily work without interruption.	I experience extended wait times and have no visibility into when the laptop will actually be prepared and delivered.	Configuration tasks are not generated automatically upon approval and depend on manual task creation, which is often delayed or forgotten.	Frustrated and unproductive while waiting for essential hardware.
PS-2 (Fulfillment)	A member of the IT Procurement / Hardware Fulfillment team managing hardware requests.	Promptly configure and distribute standard laptops immediately when new orders arrive and are approved.	I cannot prepare devices proactively and only find out about pending laptop configurations late or through escalations.	The current process lacks automated workflow routing to automatically create and assign configuration tasks to the Hardware group upon approval.	Overwhelmed by manual triage, reactive coordination, and avoidable delays.
