Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer	Maximum Marks	2 Marks

PROJECT DESIGN PHASE

Proposed Solution Template

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The current IT procurement lifecycle lacks automation and efficiency, causing fulfillment delays and substantial manual overhead, particularly for standard laptop requests. Configuration and imaging tasks are frequently overlooked or delayed due to manual ticket handoffs, leaving physical laptops sitting unconfigured in IT storage rooms while employees face unproductive downtime and frustration.
2.	Idea / Solution description	Implement an automated, low-code fulfillment workflow on ServiceNow using Flow Designer. The custom flow, titled "Standard laptop task" , runs in the Global scope under the System User context. It triggers automatically upon Service Catalog submission and executes a Create Catalog Task action once request approval is granted. The action generates a child task (sc_task), sets Short Description and Description to <i>"Laptop need to Configured"</i> , assigns the task directly to the "Hardware" group, sets approval to "Approved" , and links to the parent Requested Item (RITM) via the Maintain Items Process Engine.
3.	Novelty / Uniqueness	• Low-Code Native Orchestration: Replaces legacy, script-heavy workflows and fragile custom Business Rules with ServiceNow Flow Designer's natural-language architecture. • Zero-Touch Task Handover: Automates the transition from financial/managerial sign-off directly to hardware queue dispatch without coordinator triage. • Direct Process Engine Binding: Connects execution logic cleanly within the catalog item configuration (Maintain Items), ensuring complete decoupling from hardcoded background scripts.
4.	Social Impact / Customer Satisfaction	• Elimination of User Wait Times: Guarantees standard laptops are configured promptly upon delivery, enabling day-one onboarding readiness and continuous employee productivity. • Reduced Operational Stress: Relieves procurement coordinators from manual ticket creation and avoids forgotten handoffs. • Enhanced Transparency: Provides end users and managers with clear, real-time tracking across Request (REQ), Requested Item (RITM), and Catalog Task (SCTASK) states.
5.	Business Model (Revenue Model)	• Internal Operational ROI: Utilizes existing ServiceNow platform capabilities with zero additional software licenses, third-party middleware, or maintenance fees. • Labor Overhead Reduction: Recovers operational hours previously lost to manual data entry, ticket assignment, and escalation handling. • Asset Utilization Optimization: Prevents newly delivered inventory from sitting idle in stockrooms, maximizing return on hardware capital expenditure.
6.	Scalability of the Solution	• Modular Template Reusability: The flow pattern can be cloned or extended to additional catalog items (such as developer laptops, monitors, and standard peripheral packages) with zero structural changes. • Enterprise Volume Handling: Executes asynchronously in the background under the System User, handling high-volume hiring waves and organization-wide hardware refreshes smoothly. • Platform Upgrade Resilience: Built using standard ServiceNow Flow Designer actions, ensuring long-term upgrade compatibility without technical debt.
