UAT Execution & Report Submission

1. PURPOSE OF DOCUMENT

The purpose of this document is to briefly explain the test coverage, execution metrics, and defect resolution status of the **Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer** project at the time of release to User Acceptance Testing (UAT). It validates that the end-to-end procurement lifecycle—spanning Service Catalog intake for the Lenovo ThinkPad X1 Carbon, managerial approval routing in sysapproval_approver, low-code Flow Designer engine execution under the System User context, automated creation of pre-configured Catalog Tasks (sc_task), and dispatch to the Hardware fulfillment queue—operates with zero blocking defects and aligns fully with business acceptance criteria.

2. DEFECT ANALYSIS

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved:
