| Project Name | Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer | Maximum Marks | 4 Marks         |

| DIMENSIONS                                                                                                                                     | 1. ENTICE<br>How does someone become aware of the process?                                              | 2. ENTER<br>What do people experience as they begin?                                                 | 3. ENGAGE<br>In core moments of automation, what happens?                                                         | 4. EXIT<br>What do people experience as staging finishes?                                                 | 5. EXTEND<br>What happens after the laptop is delivered?                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
|  <b>Steps</b><br>What does the person typically experience?   | Employee navigates to ServiceNow Service Catalog > Hardware.                                            | Selects Lenovo Carbon x1, adds optional software, and clicks "Order Now".                            | Manager approves request; Flow Designer triggers and auto-creates SCTASK for Hardware.                            | Technician images and prepares laptop, closes task, and delivers device to user.                          | User logs into device; asset automatically marked "In Use" in CMDB.                                 |
|  <b>Interactions</b><br>People, Places, and Things involved   | <b>People:</b> Employee, Hiring Mgr<br><b>Places:</b> Service Portal<br><b>Things:</b> Hardware Catalog | <b>People:</b> Employee, Approver<br><b>Places:</b> Checkout Page<br><b>Things:</b> REQ/RITM Records | <b>People:</b> Flow Engine, Admin<br><b>Places:</b> Platform Engine<br><b>Things:</b> "Standard laptop task" Flow | <b>People:</b> Tech, End User<br><b>Places:</b> Staging Lab / Desk<br><b>Things:</b> Laptop, sc_task Form | <b>People:</b> User, Service Desk<br><b>Places:</b> Workstation<br><b>Things:</b> CMDB, CSAT Survey |
|  <b>Goals</b><br>"Help me..." or "Help me avoid..."           | "Help me quickly locate pre-approved laptops suited for my team."                                       | "Help me place the order with transparent delivery and cost details."                                | "Help me eliminate manual task creation so hardware config starts immediately."                                   | "Help me configure and deliver the machine without setup delays."                                         | "Help me get started immediately with zero operational friction."                                   |
|  <b>Positive</b><br>Enjoyable, motivating, or efficient steps | Clean portal interface showing standard specs and pricing clearly.                                      | Single-click checkout generating instant tracking numbers.                                           | Zero lag: Flow automatically routes task to Hardware upon approval.                                               | Hardware techs receive tasks immediately with pre-filled short descriptions.                              | Laptop is pre-configured and ready to use immediately upon delivery.                                |
|  <b>Negative</b><br>Pain points prior to automation           | Uncertainty regarding procurement eligibility and SLA policies.                                         | Anxiety about how long approvals will take in the queue.                                             | Legacy bottleneck: Tasks forgotten, leaving laptops idle in storage.                                              | Techs reacting to escalations instead of proactive task schedules.                                        | Manual asset records leading to inaccurate inventory records.                                       |
|  <b>Opportunities</b><br>Ideas to make each step better       | Implement role-based filtering for automatic hardware recommendations.                                  | Enable 1-click email approvals for line managers.                                                    | Automate hardware stock checks directly within Flow Designer.                                                     | Send automated milestone SMS updates ("Staging Complete", "Dispatched").                                  | Trigger automated onboarding surveys and self-help guide dispatch.                                  |
